

Learning as a Continuous Process

Learning is not the passive storage of facts in memory. It is an active process of building relationships, testing understanding, and revising existing judgments. When readers reduce unnecessary friction, they can devote more attention to the material itself.

Good learning environments make space for this process. They keep the learner close to the material and provide support at the moment it is needed, without pulling attention away from the text.

Reading in another language adds a second layer of effort. A helpful translation should support the reader while preserving the context of the original expression.

Feedback and Attention

Timely feedback allows readers to confirm their understanding while the question is still fresh. Waiting too long forces the reader to search for the position they were reading, and the thread of thought is lost.

For this reason, a reading tool should prioritize the current page, and quietly prepare the next page once the reading rhythm becomes stable.
